## Hw 6a — HTML/CSS Prototypes

### Reflection for Lo Fi

### Lo-Fi prototype:

For my low fi prototype, I knew I wanted to follow the aesthetic and minimalist heuristic that emphasized a simple layout devoid of clutter. I simplified the layout down to three main categories: product (name and glaze type), quantity, and total.

Additionally, I included two main functions on my cart page: Edit and Remove. At the bottom, I included an additional point of entry for checkout as the user moves into further into the purchasing process.
